Purification of telomerase on affinity material - useful for, diagnosis and treatment of cancer.

```
ô
                                                      The present sequence represents an antisense oligonucleotide directed against the human telomerase RNA component gene sequences. The oligonucleotide can be used as an affinity agent in the methods of the invention, which are used to purify human telomerase. The methods of the the use of several sequential steps, including the use of two matrixes that bind molecules bearing negative charges, a matrix that binds molecules bearing negative charges, a matrix that binds molecules bearing positive charges, an affinity purification step and a size separation. Telomerase is a particular target of anticancer therapies, and is useful in assays for characterizing (pre) cancerous cells. Telomerase can also be used to screen for specific modulators, for biochemical analysis of its activity, and in preparation of antibodies. Fragments of telomerase, or nucleic acid encoding them, are used in vaccines, and for treating over expression of telomerase, particularly in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Sequences shown in AAV41169 to AAV41181 represent antisense
oligonucleotides to the RNA component of human telomerase (hTR). These
antisense oligonucleotides specifically hybridise to a nucleotide
sequence within an accessible region of the HTR, but that does not
bybridise to a sequence within the template region of hTR. These
component of human telomerase in a sample. This is useful for diagnosing
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
component of human telomerase and the inhibitory
can providing prognosis for a cancer patient. The inhibitory
coligonucleotides can inhibit the telomerase activity level in a cell by
interfering with transcription of the RNA component, decreasing the half-
coligonucleotides can inhibit the telomerase activity is inhibiting assembly of
the RNA component into the telomerase holoenzyme, or inhibiting the
polymerase activity of telomerase. These antisense oligonucleotides can
be used for inhibiting telomerase activity in both cultured cells and in
preventing cancer, for contraception or sterilisation, for
immunosuppression, and for selectively down-regulating specific branches
coliformatory thereapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection.
                                                                                           RNA component; human telomerase; antisense oligonucleotide; infection; neuroblastoma; bladder cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; ss.
                                                   RNA component of human telomerase (hTR) antisense oligo 21.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        Kim NW, Wu F, Kealey JT, Pruzan R, Weinrich SL;

Sequences shown in AAV41169 to AAV41181 represent antisense
oligonucleotides to the RNA component of human telomerase (hTR). These
antisense oligonucleotides specifically hybridise to a nucleotide
cequence within an accessible region of the hTR, but that does not
bybridise to a sequence within the template region of hTR. These
coligonucleotides may specifically be used for detection of an RNA
component of human telomerase in a sample. This is useful for diagnosing
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
cancer (especially neuroblastoma, bladder, colon and prostate cancer),
and providing prognosis for a cancer patient. The inhibitory
clife of the telomerase RNA component transcript, inhibiting assembly of
interfering with transcription of the RNA component, decreasing the half-
clife of the telomerase RNA component transcript, inhibiting assembly of
the RNA component into the telomerase holoenzyme, or inhibiting the
polymerase activity of telomerase activity in both cultured cells and in
be used for inhibiting telomerase activity in both cultured cells and in
preventing cancer, for contraception or sterilisation, for
immunosuppression, and for selectively down-regulating specific branches
cof the immune system, e.g. a specific subset of T-cells, in anti-
inflammatory therapies or for treating infections by, e.g. yeast,
clife of the fulliphical person of the treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection.

This invention describes a novel composition comprising human telomerase having at least 2000-fold (preferably at least 6000-fold) increased relative purity compared with crude extract of cells from adenovirus transformed kidney cell line. The composition is useful for eliciting an immune response in animals and may therefore be used as a vaccine for treating diseases associated with the overexpression of telomerase e.g. cancer. AA223626-Z23637 represent oligomucleotides used in the isolation of human clone 28-1 which contains a fragment of the human telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               human; immune response; cancer; vaccine; treatment; disease;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel composition comprising human telomerase relative purity compared with created for following at least 6000-601d) increased relative purity compared with compession of cells from adenovirus-transformed kidney cell line. The composition is useful for eliciting an immune response in animals and may therefore be used as a vaccine for treating diseases associated with the overexpression of telomerase e.g. cancer. AAZ23626-Z23637 represent oligomucleotides used in the isolation of human clone 28-1 which contains a fragment of the human telomerase
                                               Telomerase; human; immune response; cancer; vaccine; treatment; disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 human; immune response; cancer; vaccine; treatment; disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Compositions comprising human telomerase, useful for treating diseases associated with overexpression of telomerase e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The invention relates to polynucleotide inhibitors (I) and methods for inhibiting telomerase activity. (I) are useful in inhibiting telomerase activity. (I) are useful in inhibiting telomerase activity and proliferation of a telomerase positive cell, and in manufacturing a medicament for inhibiting telomerase activity in a cell and in treating a medicament for inhibiting telomerase activity in a cell and in treating a tumour or in manufacturing a medicament for the Cueful in treating a tumour or in manufacturing a medicament for the cueful in treating a tumour or in manufacturing a medicament for the cueful in treating a tumour or in manufacturing a medicament for the cueful in treating a tumour or in manufacturing a medicament for the cueful in treating to detecting RNA or DNA. Inhibition of telomerase activity in cells in vivo is useful in prophylactic and therapeutic methods of treating encer and other disorders involving inappropriate expression of telomerase, and in treating veterinary proliferative chases. Inhibition of telomerase in hammatopoietic stem cells is useful continued to the immune of the continued that in the cells is useful continued to the continued that the continued tha
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              branches of \dot{L}he immune system. The present sequence represents human telomerase polynucleotide inhibitor #9, as described in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel composition comprising human telomerase having at least 2000-fold (preferably at least 6000-fold) increased relative purity compared with crude extract of cells from adenovirus-transformed kidney cell line. The composition is useful for eliciting an immune response in animals and may therefore be used as a vaccine for treating diseases associated with the overexpression of telomerase e.g. cancer. AAZ213626-Z23637 represent oligonucleotides used in the isolation of human clone 28-1 which contains a fragment of the human telomerase described in the method of the invention
                                                                                                                                                                                                                                                       Compositions comprising human telomerase, useful for treating diseases associated with overexpression of telomerase e.g. cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; telomerase; hTR; cytostatic; anti-inflammatory; adenocarcinoma;

The sequence represents a biotinylated antisense oligonucleotide used in the purification of human telomerase. The invention relates to a purified human telomerase core enzyme protein comprising 2000-fold increased purity compared with a crude extract of cells from adenovirus-transformed purity compared with a crude extract of cells from adenovirus-transformed kidney cell line (293 cells) and when associated with telomerase RNA component has DNA polymerase activity and a molecular weight of 200-2000 killo Daltons (kDa). The purified telomerase is useful for inducing a humoral or cell-mediated immune response in an animal. Purified telomerase or immunogenic fragments are useful as vaccines for treating diseases associated with over-expression of telomerase, such as cancer and for producing antibodies that recognize telomerase, which are useful as affinity agents in isolating the proteins and for detecting the presence of proteins in a sample, such as cell or tissue. Identification of telomerase and/or telomerase associated proteins are also useful for carcening compounds to identify agents that alter the association of telomerase associated proteins are also useful for carcening compounds to identify agents that alter the association of telomerase associated proteins are also useful for carcening compounds to identify agents that alter the association of telomerase.

                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                           The sequence represents a biotinylated antisense oligonucleotide used in the purification of human telomerase. The invention relates to a purified human telomerase core enzyme protein comprising 2000-fold increased purity compared with a crude extract of calls from adenovirus-transformed purity compared with a crude extract of calls from adenovirus-transformed component has DNA polymerase activity and a molecular weight of 200-2000 kilo baltons (kDa). The purified telomerase is useful for inducing a humoral or cell-mediated immune response in an animal. Purified telomerase or immunogenic fragments are useful as vaccines for treating diseases associated with over-expression of telomerase, which are useful as a fifnity agents in isolating the proteins and for detecting the proteins of proteins in a sample, such as cell or tissue. Identification of telomerase aids in disgnosis of cancer or pre-cancerous states.

Telomerase and/or telomerase associated proteins are also useful for screening compounds to identify agents that alter the association of telomerase and proteins, such as nucleolin or EF2H with telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                      ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Purified human telomerase, useful for inducing immune response in animals, comprises several thousand folds increased purity compared with cytoplasmic crude cell preparations.

The present sequence is that of an oligonuclectide prepared using phosphoramidite chemistry. A nanoparticle conjugate was prepared by joining the 5'-mercaptoalkyl oligonuclectide to gold nanoparticles. The nanoparticle conjugate was lided to enhance the sandwich amplification of a silver signal on glass slides containing silver staining. This illustrated the method of the invention, which is based on the discoveries that: (1) gold nanoparticles coated with oligonuclectides bind to silver that has previously been deposited on gold nanoparticle-oligonuclectide conjugates immobilised by hybridisation on a glass substrate or plate; and (2) that the gold-nanoparticle-oligonuclectide-silver-gold oligonuclectide conjugates immobilised by hybridisation on a glass substrate or plate; and (2) that the discoveries were applied to a method for amplifying signal by chancing silver deposition in detecting systems where the formation of silver spot serves as a reporter for the presence of a molecule.

Companies and assays where the target molecules is bound to a substrate or is captured by a capture molecule is bound to a tissue sample) and assays where the target molecule is bound to a cutility in increasing the signal strength in diagnostic and screening applications involving detection of target molecules arrayed at discrete positions on a solid surface. It provides a means for greatly enhancing the sensitivity of tests carried out on microarrays or microchips. The method is simple, economical, and provides a large enhancement in signal

```
This invention relates to a purified human telomerase protein, which when associated with telomerase RNA component has DNA polymerase activity.

Also disclosed in the specification is a method for assessing a regulator (preferably a telomerase inhibitor or activator of telomerase involves measuring telomerase enzymatic activity of the composition in presence of a regulator. The telomerase protein of the invention may be used in the developing and testing assays for measuring telomerase activity which are useful in characterising cancer and pre-cancer cells, for identifying and testing antibodies against telomerase. The mammalian telomerase protein of the invention is at least approximately 3000 fold more pure (in terms of telomerase activity per weight of protein) than a crude extract of cell from adenovirus- transformed kidney cell. Purified telomerase (cell from adenovirus- transformed kidney cell. Purified telomerase for feacilitates a thorough biochemical analysis of the enzyme's mechanism for developing mechanism based regulators. The present sequence represents a chuman telomerase antisense oligonucleotide which has affinity to telomerase and is used to purify the telomerase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pruzan RA;

Also disclosed with telomerase RNA component has DNA polymerase activity.

Also disclosed in the specification is a method for assessing a regulator (preferably a telomerase RNA component has DNA polymerase activity.

Also disclosed in the specification is a method for assessing a regulator of preferably a telomerase involves measuring telomerase enzymatic activity of the composition in presence of a regulator. The telomerase protein of the invention may be used in developing and testing assays for measuring telomerase activity which are useful in characterising cancer and pre-cancer cells, for identifying and testing regulators of telomerase activity in in vitro assay and for preparing antibodies against telomerase. The mammalian telomerase protein of the invention is at least approximately 3000 fold more pure (in terms of telomerase activity per weight of protein) than a crude extract of cell from adenovirus- transformed kidney cell. Purified telomerase (activity per weight of protein) than a crude extract of facilitates a thorough biochemical analysis of the enzyme's mechanism for developing mechanism- based regulators. The present sequence represents a tunnary endeman and affinity to buman telomerase and sequence of the enzyme's mechanism for the numan telomerase antisense oligonucleotide which has affinity to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Obtaining telomerase, by preparing enriched solution from cell expressing telomerase, combining the solution with oligonucleotide having specific affinity for the protein and collecting protein bound to oligonucleotide.
invention relates to a purified human telomerase protein, which when
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention describes a method of obtaining mammalian telomerase protein (I). The method involves preparing enriched solution (ES) from a cell expressing telomerase where the component of (I) in ES is separated from other proteins expressed by cell by combining ES with oligonucleotide (O) having specific affinity for (I), and collecting
                                                                                                                                                                                                                                                                                                                                              telomerase and is used to purify the telomerase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

protein bound to (0). The oligonucleotide comprises a retrievable label such as biotin and contains a sequence that is specifically recognized by telometrase protein. The oligonucleotide contains or does not contain the sequence (TTAGGG): The method further comprises combining a fraction containing telomerase protein with an anion exchange matrix, and collecting protein that binds the matrix, combining a fraction containing telomerase protein with a cation exchange matrix. The method telomerase protein that binds the matrix. The method comprises successively enriching fractions containing telomerase protein containing telomerase protein on several different ion exchange matrices and combining a fraction on several different ion exchange matrix, where the intermediate containing telomerase protein with an intermediate selectivity matrix and separating a fraction containing the telomerase protein that binds the matrix, where the intermediate selectivity matrix and separating a fraction containing the telomerase protein that binds a fraction containing the telomerase protein that binds a fraction containing the telomerase protein that binds and a fraction containing the telomerase protein that binds and separating a fraction containing the telomerase protein that sequence represents an an extract of cells stably expressing telomerase.                                                                                                                                                                                                                                                                                                                                  8
        protein bound to (0). The oligonaclectide comprises a retrievable label such as biotin and contains a sequence that is specifically recognized by telemerase protein. The oligonaclectide contains or does not contain the sequence (TTMGGG). The method further comprises combining a fraction containing telomerase protein with an anion exchange matrix, and collecting protein that binds the matrix, combining a fraction containing telomerase protein that binds the matrix. The method containing protein that binds the matrix. The method containing telomerase protein that binds the matrix. The method of matrix), and collecting protein that binds the matrix. The method containing telomerase protein with an intermediate selectivity matrix, on several different ion exchange matrices and combining a fraction on several different ion exchange matrix, where the intermediate collecting protein that binds the matrix, where the intermediate selectivity matrix, and separating a fraction containing the telomerase protein with an intermediate selectivity matrix and separating a fraction containing the telomerase protein chromatography or gradient centrifugation. The protein by gel filtration chromatography or gradient centrifugation. The collecting protein the matrix of cells stably expressing the matrix of the matrix of the centrifugation. The collection process is protein the centrifugation.
                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                        telomerase. This sequence represents an antisense oligonucleotide to the RNA component of human telomerase that can be used in the purification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Pruzan RA;

telomerase activity that may be useful for treating cancers. The method may be used to identify regulators e.g. antibodies, of telomerase activity which may be useful as cancer treatments. It has been found that found that the cells of many human cancers have telomerase activity. This helps explain why cancer cells continue dividing without becoming senescent. If telomerase activity in cancer cells can be inhibited, the cancer cells are expected to reach senescence and cease dividing. The present sequence is human telomerase antisense oligonulceotide used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                              ;

The oligonucleotide can be used as an affinity agent in the methods of the invention, which were used to purify human telomerase. The methods of the the use of several sequential steps, including the use of two matrixes that bind molecules bearing negative charges, a matrix that binds molecules bearing negative charges, a matrix that binds molecules bearing positive charges, an affinity purification step and a size separation. Telomerase is a particular target of anticancer therapies, and is useful in assays for characterizing (pre) cancerous cells. Telomerase can also be used to screen for specific modulators, for biochemical analysis of its activity, and in preparation of antibodies. Fragments of telomerase, or nucleic acid encoding them, are used in vaccines, and for treating over expression of telomerase, particularly in
activity which may be useful as cancer treatments. It has been found that found that the cells of many human cancers have telomerase activity. This helps explain why cancer cells continue dividing without becoming senescent. If telomerase activity in cancer cells can be inhibited, the cancer cells are expected to reads senescence and cease dividing. The present sequence is human telomerase antisense oligonulceotide used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                     Human; telomerase RNA component; anticancer therapy; purification; assay; vaccine; cancer; antisense oligonucleotide; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              This invention describes a novel composition comprising human telomerase having at least 2000-fold (preferably at least 6000-fold) increased relative purity compared with crude extract of cells from adenovirus-transformed kidney cell line. The composition is useful for eliciting an immune response in animals and may therefore be used as a vaccine for cracting diseases associated with the overexpression of telomerase e.g. cancer. AAZ23656-Z23637 represent oligomotoleotides used in the isolation of human clone 20-1 which contains a fragment of the human telomerase

The sequence represents a biotinylated antisense oligonucleotide used in the purification of human telomerase. The invention relates to a purified human telomerase core enzyme protein comprising 2000-fold increased purity compared with a crude extract of cells from adenovirus-transformed kidney cell line (293 cells) and when associated with telomerase RNA component has DNA polymerase activity and a molecular weight of 200-2000 kilo Daltons (kDa). The purified telomerase is useful for inducing a humoral or cell-mediated immune response in an animal. Purified telomerase or immunogenic fragments are useful as vaccines for treating diseases associated with over-expression of telomerase, such as cancer and for producing antibodies that recognize telomerase, which are useful as affinity agents in isolating the proteins and for detecting the presence of proteins in a sample, such as cell or tissue. Identification of telomerase and/or telomerase associated proteins are also useful for screening compounds to identify agents that alter the association of telomerase associated proteins are also useful for screening compounds to identify agents that alter the association of telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Purified human telomerase, useful for inducing immune response in animals, comprises several thousand folds increased purity compared with cytoplasmic crude cell preparations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Atkinson EM, Lichtsteiner SP, Vasserot AP, Pruzan RA;

Also disclosed in the specification is a method for assessing a regulator. Also disclosed in the specification is a method for assessing a regulator. Also disclosed in the specification is a method for assessing a regulator or ellomerase inhibitor or activator of telomerase involves measuring telomerase enzymatic activity of the composition in presence of a regulator. The telomerase protein of the invention may be used in developing and testing assays for measuring telomerase activity which are useful in characterising cancer and pre-cancer cells, for identifying and testing regulators of telomerase activity in in vitro assay and for preparing antibodies against telomerase. The mammalian telomerase protein of telomerase activity per weight of protein) than a crude extract of cell from adenovirus- transformed kidney cell. Purified telomerase (a facilitates a thorough biochemical analysis of the enzyme's mechanism for developing mechanism- based regulators. The present sequence represents a chuman telomerase antisense oligonuclocide which has affinity to thome telomerase and is used to purify the telomerase protein of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention relates to a purified human telomerase protein, which when

```
The invention describes a method of obtaining mammalian telomerase

protein (1). The method involves preparing enriched solution (ES) from a cell expressing telomerase where the component of (1) in ES is separated from other proteins expressed by cell by combining ES with coligonucleotide (0) having specific affinity for (1), and collecting protein bound to (0). The oligonucleotide comprises a retrievable label cut as biotin and contains a sequence that is specifically recognized by telomerase protein. The oligonucleotide comprises combining a fraction containing telomerase protein with an anion exchange matrix, and collecting protein that binds the matrix, combining a fraction containing telomerase protein that binds the matrix. The method collecting protein that binds the matrix. The method containing telomerase protein with a cation exchange matrix. The method containing telomerase protein that binds the matrix, where the intermediate containing telomerase protein with an intermediate selectivity matrix, collecting protein with an intermediate selectivity matrix, collecting protein with an intermediate selectivity matrix, collecting protein with an intermediate selectivity matrix, especially protein with an intermediate selectivity matrix, and separating a fraction containing the telomerase protein by gel filtration chromatography or gradient centrifugation. The telomerase is enriched from an extract of cells stably expressing telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Obtaining telomerase, by preparing enriched solution from cell expressing telomerase, combining the solution with oligonucleotide having specific affinity for the protein and collecting protein bound to oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              telomerase. This sequence represents an antisense oligonucleotide to the RNA component of human telomerase that can be used in the purification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Weinrich SL, Atkinson EM, Lichtsteiner SP, Vasserot AP, Pruzan RA;

The method may be used to identify regulators e.g. antibodies, of telomerase activity which may be useful as cancer treatments. It has been found that found that the cells of many human cancers have telomerase activity. This helps explain why cancer cells continue dividing without becoming senescent. If telomerase activity in cancer cells can be inhibited, the cancer cells are expected to reach senescence and cease dividing. The present sequence is human telomerase antisense oligonulceotide used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gарв

This primer is used for the RT-PCR amplification of an RNA component of human telomerase (hTR). This is used in the method of invention of determining the amount of hTR in a sample. The method comprises camplifying a sequence of hTR and a control polynucleotide from a sample and determining an amount of amplified hTR and an amount of amplified control polynucleotide. The amount of amplified hTR is normalised with crespect to the amount of hTR which provides antisense oligonucleotides to creapect to the amount of hTR which provides antisense oligonucleotides to the hTR which may specifically be used for detection of an RNA component of hTR which may specifically be used for detection of an RNA component of human telomerase in a sample. This is useful for diagnosing cancer (especially neuroblastoma, bladder, colon and prostate cancer), and providing prognosis for a cancer patient. The antisense oligonucleotides con be used for inhibiting telomerase activity in both cultured cells and control of the immunosuppression, and for selectively down-regulating specific branches of the immune system, e.g. a specific subset of T-cells, in anti-nilammatory theraples or for treating infections by, e.g. yeast,
                                                                                                                                 New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New human GC6 gene, useful for identifying agents for treating diseases and/or conditions associated with cell senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cellular senescence; modulator; GC6 gene; senescent gene expression;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ·.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence is a PCR primer specific to human telomerase RNA (hTR). It is used to amplify human staufen (hStau) cDNA synthesised using random hexamer primers and Superscript II reverse transcriptase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              RNA component; human telomerase; antisense oligonucleotide; infection; neuroblastoma; bladder cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; RT-PCR; primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human staufen polypeptide useful in methods for identifying telomerase inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                 senescence. Recombinant expression vectors comprising a recombinant polynucleotide corresponding to a polynucleotide in a human GG gene, are useful for altering senescent gene expression. The vectors and host cells comprising the vectors are useful for identifying agents that prevent or modulate senescent gene expression. The polynucleotides are useful for producing the protein, pGGG and nucleic acid derivatives. The proteins encoded are useful for raising antibodies specific for pGGG, which are useful for isolating pGGG, and for detecting cells comprising pGGG in complex cell mixtures. The characterization of the polynucleotides enable the identification of therapeutic agents that identify and distinguish between young and senescent cells. This enables treatment of aging diseases induced or exacerbated by cellular senescence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to a method for diagnosing and/or monitoring the evolution of cancers. The method comprises analysing enzyme telomerase RNA in blood plasma or serum. The method is typically used for diagnosing breast, ovarian, stomach or colon cancer and/or monitoring the evolution of the cancers after treatment by chemotherapy or operations. The present sequence is a PCR primer for human telomerase RNA (HTR), which was used in the example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     e.g. breast
plasma or serum.

The invention relates to promoter regions from mouse and human telomerase

RNA (TR) component genes. The TR gene promoter can be linked to a

RNA (TR) component genes. The TR gene encoding a cytocoxin, for therapy of

cancer, especially neoplasias. The telomerase is necessary for the

cancer, especially neoplasias. The telomerase is necessary for the

currestricted proliferative capacity of many human cancers. Mutation or

dysregulation of the telomerase repression pathway may cause reactivation

or upregulation of telomerase expression in cancer. Substances,

cleantified in the methods, can be used to block transcription from the TR

consideration of telomerase expression in cancer. Substances.

Clean promoter through interaction of the 5' regulatory sequences. These

substances, e.g. antisense oligonucleotides, transcription factors,

cuseful for cancer therapy. In particular, gene therapy vectors

cuseful for cancer therapy. In particular, gene therapy vectors

cuseful for cancer therapy. In particular, gene therapy vectors

cuseful for cancer therapy. In particular, gene therapy vectors

cuseful for cancer therapy. In particular, gene therapy vectors

cuseful for cancer therapy and the promoter and a viral thymidine

kinase gene can be controlled or treated. Direct down-regulation of

ceffective anticancer therapy and the cloning of the hTR gene promoter

allows the analysis of therapeutic molecules which modulate hTR promoter

callows the analysis of therapeutic molecules which modulate hTR promoter

callows the analysis of therapeutic molecules which modulate for amplifying

mammal; antisense; triplex forming oligonucleotide; plasmid;

(first entry)

```
The RNA components of (non) human mammalian telomerase(s) especially from mouse, rat and chinese hamster are all claimed. Antisense oligonucleotides can be used to block the activity of the telomerase; probes and primers can be used in detection; vectors and host cells transformed with the isolated telomerase genes can be used for production of telomerases; RNA and DNA ribozymes and triplex forming of telomerases in the rate of the solated telomerase genes can be used the reported against the telomerase genes can be used the rapeutically as can plasmids. A mouse which lacks the telomerase gene (also claimed) can be used for study of telomera regulation in vivo, and the role it plays in immortalisation. Three primers (AAT11040, AAT11041).
                                                                Primer for production of telomerase antisense oligonucleotide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   senescence and immortalisation.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence, a forward primer for the RNA component of human telomerase (RCHT), was used in a primed in situ labelling (PRINS) procedure. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomeras, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polymoleotides. The RCHT may also be used in the identification of telomerase modulating agents, and in the detection of telomerase related, or neoplastic conditions in a patient. Polymoleotides of at least 25 consecutive mucleotides identical, or complementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used for the gene therapy of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence, a nested PCR primer for the RNA component of human telomerase (RCHT), was used in a 5' RACE procedure. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomeras, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polynucleotides. The RCHT may also be used in the identification of telomerase modulating agents, and in the detection of telomerase related, or neoplastic conditions in a patient. Polynucleotides of at least 25 consecutive nucleotides identical, or complementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RNA component of mammalian telomerase, esp. human - useful in identifying
modulating agent; neoplastic condition; regulatory sequence; gene therapy; disease; PCR primer;

RCHT was derived from a genomic DNA library obtd. from the human lung fibroblast cell line WI-38. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomeres, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polynucleotides. The RCHT may also be used in the identification of telomerase modulating agents, and in the detection of telomerase related, or neoplastic conditions in a patient.
Polynucleotides of at least 25 consecutive nucleotides identical, or
                                                                                                                                                                                                                                                                                                                                                                                                                         RNA component of mammalian telomerase, esp. human - useful in identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                complementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used for the gene therapy of human diseases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          RNA component; human; telomerase; polymerase chain reaction; recombinant production; synthesis; mutant; detection; mammalian; dentification; modulating agent; neoplastic condition; transcriptional regulatory sequence; gene therapy; disease; PCR primer;

                                                                                                                                                       The present sequence, a PCR primer for the RNA component of human telomerase (RCHT), was used in a 3' RACE procedure. The RCHT can be used in the recombinant prodn. of an active telomerase mol., capable of adding sequences to chromosomal DNA telomerase, and in the synthesis of mutant sequences for the detection of mutant mammalian telomerase RNA component polynucleotides. The RCHT may also be used in the identification of telomerase modulating agents, and in the detection of telomerase related, or neoplastic conditions in a patient. Polynucleotides of at least 25 consecutive nucleotides identical, or complementary to the RCHT sequence linked to heterologous transcriptional regulatory sequences, can be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the
                                                                  mammalian telomerase, esp. human - useful in identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cancer; eukaryotic parasite; hTR; vertebrate telomerase; yeast; protozoa; tumour; antibody; polymerase chain reaction; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding essential RNA components of human telomerase - also truncated or recombinant telomerase, useful for diagnosis and treatment of cancer and infection by eukaryotic parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents PCR 3'-primer R3C used for amplifying human telomerase (hTR). The RNA and DNA can be used in hybridisation assays to detect or quantify telomerase activity in cells, tissue or fluid samples, e.g. for diagnosis of eukaryotic parasites (yeast and protozoa) or tumours. It is also useful as primers for amplification assays. The truncated or recombinant vertebrate telomerase is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

therapeutically to increase telomerase activity (also as reagents in the screening assay) while the RNA or other inhibitors such as antisense molecules, are used to reduce such activity. Typical applications are initiation/restoration of activity to cause senescence or to prevent immortalisation of cells in tumours or parasites. The DNA is also used to produce recombinant telomerase, which can then be used conventionally to raise antibodies for diagnostic detection of telomerase. Detecting telomerase allows early diagnostic detection of telomerase. Detecting signs manifest. Telomerase inhibitors directed against e.g. Trypanosoma should cause fewer side effects than drugs currently used to treat such infections. The DNA encodes those parts of hTR RNA essential for activity but are significantly shorter than the endogenous RNA component
                                                                                                                                                                                                                                                                                                                                                     ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This primer is used for the RT-PCR amplification of an RNA component of human telomerase (hTR). This is used in the method of invention of determining the amount of hTR in a sample. The method comprises amplifying a sequence of hTR and a control polynucleotide from a sample and determining an amount of amplified hTR and an amount of amplified control polynucleotide. The amount of amplified hTR is normalised with respect to the amount of amplified control polynucleotide to provide a normalised amount of hTR which provides a determination of the amount of hTR in the sample. The invention provides antisense oligonucleotides to

ö
the hTR which may specifically be used for detection of an RNA component of human telomerase in a sample. This is useful for diagnosing cancer (especially neuroblastoma, bladder, colon and prostate cancer), and providing prognosis for a cancer patient. The antisense oligonucleotides can be used for inhibiting telomerase activity in both cultured cells and in cells in vivo. They can be used in therapeutics for treating or immunosuppression, and for selectively down-regulating specific branches of the immune system, e.g. a specific subset of T-cells, in anti-inflammatory therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human, telomerase reverse transcriptase, hTRT, TRT, diagnosis, prognosis, cell proliferation, cancer, ageing, ribonucleoprotein, PCR primer, ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a PCR primer from the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the following methods. (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the

ö
compound; (B) preparation of recombinant telomerase by contacting a protein preparation of HTRT with a telomerase RNA component; (C) detection of the HTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample, and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human, telomerase reverse transcriptase, hTRT, TRT, diagnosis, prognosis, cell proliferation, cancer, ageing, ribonucleoprotein, PCR primer, ss.

present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polymucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contacting a protein preparation of the hTRT with a telomerase BNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation of reate a medicament that inhibits of ageing A protein preparation of hTRT and the polymucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used
                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Primers F3b and R3c (see AAV19489) were designed for the PCR amplification of the human telomerase hTR gene (see AAV19481). hTR mRNA levels were showed to correlate with telomerase activity levels in a variety or mortal and immortal cell lines. Methods of the invention allow detection and quantitation of TPC2 (see AAV19479), TPC3 (see AAV19480) and/or TPC2 gene products and can be used to detect immortal cells, especially telomerase positive cancer cells
                                                                                                                                                                                                                                                                                     treat conditions that are associated with high telomerase activity.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  amplification of the human telomerase hTR gene (see AAV19481). hTR mRNA levels were showed to correlate with telomerase activity levels in a variety or mortal and immortal cell lines. Methods of the invention allow detection and quantitation of TPC2 (see AAV19479), TPC3 (see AAV19480) and/or TPC2 gene products and can be used to detect immortal cells, especially telomerase positive cancer cells

cellular portion of body fluid from a cancer patient using a modified cellular portion of body fluid from a cancer patient using a modified tellular portion of body fluid from a cancer patient using a modified cellular portion of a modified cancer comprises: (a) removing the cellular portion of a body fluid specimen from the patient; (b) preparing a protein extract from the body fluid remainder; (c) assaying the extract for the presence and quantity of telomerase RNA or telomerase activity; and (d) comparing the results with normal levels, to determine the presence of cancer. The methods are therapy effectiveness Unlike prior art telomerase activity assays in cancer patients, the method allows noninvasive sample collection. The methods are also more reliable and less tumour specific than other methods which detect circulating tumour markers. The present sequence represents a human telomerase RNA template PCR primer used in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This invention describes a novel method for disgnosing bladder cancer which comprises detecting telomerase RNA in a urine sample. The method of the invention has greater sensitivity and reliability than assays for telomerase activity (cf. WO 9735871). This sequence represents a primer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Detecting telomerase RNA in urine - useful for diagnosis of bladder

                                                                                                                                                                                                                                                                                                                                                                        This invention describes a novel method for diagnosing bladder cancer which comprises detecting telomerase RNA in a urine sample. The method of the invention has greater sensitivity and reliability than assays for telomerase activity (cf. WO 975871). This sequence represents a primer used in the method of the invention

The invention relates to methods for modulating and identifying cellular senescence. Recombinant expression vectors comprising a recombinant polymucleotide corresponding to a polymucleotide in a human GGG gene, are useful for altering senescent gene expression. The vectors and host cells comprising the protein, pGGG and mucleic acid derivatives. The prevent or modulate senescent gene expression. The polymucleotides are useful for porducing the protein, pGGG and mucleic acid derivatives. The proteins encoded are useful for raising antibodies specific for pGGG, which are useful for isolating pGGG, and for detecting cells comprising pGGG in complex cell mixtures. The characterization of the polymucleotides enable the identification of therapeutic agents that identify and distinguish between young and senescent cells. This enables treatment of aging diseases induced or exacerbated by cellular senescence
                                                                                                                                                                                                                                                                                                                                New human GCG gene, useful for identifying agents for treating diseases and/or conditions associated with cell senescence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  TPC2, TPC3; human; telomere length regulation; cancer; pregnancy; fertility; diagnosis; therapy; PCR primer; ss.

activity in a sample. The method comprises treating the sample with a solid phase to bind telomerase, separating the solid phase from the solid phase to bind telomerase, separating the solid phase from the sample which may be treated to elute bound telomerase and assaying the sample for telomerase activity. Also described are: (1) a kit (11) for detecting telomerase activity, and (2) a component (111) of an assay system for telomerase activity, and (2) a component (111) of an assay system for telomerase activity, comprising a solid phase for binding telomerase activity, comprising a solid phase for binding telomerase on which is present a substrate for telomerase elongation. (1) is useful for ancer diagnosis or prognosis and detection of micrometastasis. The solid phase used in (1) is useful for separating telomerase from a sample and therefore for detecting telomerase from a sample and therefore for detecting to telomerase activity. (11) is useful for detection of cancer calls and may also comprises means for assaying a mannal for assaying a mannal for assaying a reverse transcriptase (RT) PCR primer for
                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting telomerase activity in samples, useful for diagnosis of cancer and micrometastasis, comprises treating sample with solid phase, removing solid phase and treating to elute bound telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   present invention describes a method (I) for detecting telomerase

The present invention describes a method (I) for detecting telomerase activity in a sample. The method comprises treating the sample with a solid phase to bind telomerase, separating the solid phase from the solid phase to bind telomerase, separating the solid phase from the telomerase and assaying the sample for telomerase activity. Also described are: (1) a kit (II) for detecting telomerase activity, comprising a solid phase and one or more components for assaying telomerase activity, comprising a solid phase activity, comprising a solid phase for binding telomerase activity of prognosis and detection of telomerase elongation. (I) is useful for ancer or micrometastasis. The solid phase used in (I) is useful for separating telomerase from a sample and therefore for detecting telomerase from a sample and therefore for detecting telomerase from a sample and therefore for cancer. The sparating telomerase for assaying an mRNA diagnostic for cancer. The present sequence represents a reverse transcriptase (RT) PCR primer for human telomerase RNA, which is used in an example from the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Detecting telomerase activity in samples, useful for diagnosis of cancer and micrometastasis, comprises treating sample with solid phase, removing solid phase and treating to elute bound telomerase.
                                                                                                                                                                                                                                                                                               telomerase; hTR; reverse transcriptase; RT-PCR; PCR primer;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             5.8%; Score 26; DB 1; Length 26; 00.0%; Pred. The invention relates to detecting human telomerase RNA (FUERT) RNA (CC in a bodily fluid, comprising amplifying RNA extracted from plasma or serum sample, or its corresponding CDNA comprising (I), using primers or probes that target (I) or CDNA and detecting qualitatively or probes that target (I) or CDNA and detecting qualitatively or constitutively amplified product of (I) or CDNA product. The method is useful for detecting (I) in a bodily fluid, which is useful for constitutively amplified broader (I) expressing cells or tissue which include a malignancy preferably a cancer of breat, ovarian, head and neck, lung, cervical, colorectal, gastric, liver, pancreatic, bladder, prostate, condometrial, brain, kidney, or oesophagus, or amelanoma or sarcoma, cervical intrappthalial neophasia, bronchial dysplasia, atypical carcinoma in-situ, preferably cervical dysplasia, cartypical endometrial hyperplasia, or Barrett's oesophagus, where the hyperplasia of the breast, ductal carcinoma in-situ, colorectal adenoma, atypical endometrial hyperplasia, or Barrett's oesophagus, where the construction of the construction of the malignancy or premalignancy and for monitoring a therapy administered to a human. (I) provides a marker which is utilised as a during or following surgical procedures to remove the humans during or following surgical procedures to remove consulyment or malignant or menaphancy or qualitatively, of (I) in plasma or premalignant or menaphancy or relapsed cancer, impending relapse, or treatment failure.
                                                                                                                                                                                                                           cancer; breast; ovarian; head and neck; lung; cervical; colorectal; cancer; breast; ovarian; head and neck; lung; cervical; cosophagus; melanoma; sarcoma; premalignancy; carcinoma in-situ; cervical dysplasia; bronchial dysplasia; cervical intraepithelial neoplasia; atypical hyperplasia; colorectal adenoma; atypical endometrial hyperplasia; tumour; Barrett's oesophagus; telomerase-directed therapy; primer; ss.
                                                                                                                                                                                                     telomerase-associated RNA template; hTR; endometrial; malignancy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to detecting human telomerase RNA template (hTR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Detecting human telomerase RNA template RNA or human telomerase transcriptase protein RNA in bodily fluid, useful as marker for diagnosing, monitoring or treating cancer, carcinoma in situ or premalignancy.
                                                                                                                                                        Human telomerase-associated RNA template (hTR), PCR primer hTR2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 1; Page 14; 30pp; English.

The method is useful for detecting (i) in a bodily fluid, which is useful for detecting (i) in a bodily fluid, which is useful for malignancy preferably a cancer of breast, ovarian, head and neck, lung, cervical, colorectal, gastric, liver, pancreatic, bladder, prostate, endometrial, brain, kidney, or oesophagus, or a melanoma or sarcoma, premalignancy or carcinoma in-situ, preferably cervical dysplasia, ervical intraspithalial neoplasia, bronchial dysplasia, atypical hyperplasia of the breast, ductal carcinoma in-situ, colorectal adenoma,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cancer; breast; ovarian; head and neck; lung; cervical; colorectal; gastric; liver; pancreatic; bladder; prostate; brain; kidney; oesophagus; melanoma; sarcoma; premalignancy; carcinoma in-aitu; cervical dysplasia; bronchial dysplasia; cervical intraspithelial neoplasia; atypical hyperplasia; colorectal adenoma; atypical endometrial hyperplasia; tumour; Barrett's oesophagus; telomerase-directed therapy; primer; ss.
The method allows the development and application of telomerase-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; telomerase-associated RNA template; hTR; endometrial; malignancy;
                                     therapy even when only premalignant tumours, early cancer, or occult cancer or metaertasis auch as following resection or in minimal residual disease are present. The present sequence represents a PCR primer for human telomerase-associated RNA template (hTR)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           reverse

invention also relates to purified, synthetic or recombinant peptides such as TPC2 or TPC3 used for detecting regulators of telomere length and telomerase activity in mammalian cells and for a variety of related diagnostic and therapeutic purposes. The method is useful for screening, diagnosing, monitoring and treating diseases and other conditions such as ancer, pregnancy, fertility, telomere length and telomerase-activity. The present sequence is a reverse transcription (RT) PCR primer used for amplifying human telomerase (hTR) cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to methods and reagents for regulating telomere length and for modulating telomerase activity in mammalian cells. The invention also relates to purified, synthetic or recombinant peptides such as TPC2 or TPC3 used for detecting regulators of telomere length and telomerase activity in mammalian cells and for a variety of related diagnostic and therapeutic purposes. The method is useful for screening, diagnosting, monitoring and treating diseases and other conditions such as cancer, pregnancy, fertility, telomere length and telomerase-activity. The present sequence is a reverse transcription (RT) PCR primer used for amplifying human telomerase (hTR) CDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Peptide products of the human TPC2 and TPC3 gene are involved in regulation of telomere length and activity are useful to diagnose and treat telomere length and activity-related diseases.
                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; telomerase; TR; telomerase activity-related disease; therapy; cancer; pregnancy; fertility; RT-PCR primer; ss.

Accurate, reliable diagnosis and/or prognosis of cancer, e.g. breast cancer, by analyzing the RNA components of telomerase in plasma or serum.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   monitoring the evolution of cancers. The method comprises analysing enzyme telomerase RNA in blood plasma or serum. The method is typically used for diagnosing breast, ovarian, stomach or colon cancer and/or monitoring the evolution of the cancers after treatment by chemcherapy or operations. The present sequence is a PCR primer for human telomerape RNA (HTR), which was used in the example from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; ss; PCR; telomerase; cancer; pregnancy; fertility; neoplasm; hTR;

The invention relates to a monoclonal or isolated polyclonal antibody specifically binds human TPC2 or TPC3 (not defined, appearing as ADG82569 and ADG82571). Also included are an antibody obtained by collecting antiserum from a subject immunised with a peptide comprising at least 10 cantiguous amino acids of TPC-2 pr TPC-3 a host cell secreting the cartibody, a composition for obtaining a TPC2-specific antibody comprising at least 10 contiguous amino acids ADG82569, a composition for obtaining at least 10 contiguous amino acids ADG82569, a composition for obtaining a TPC3-specific antibody comprising at least 10 contiguous amino acids of ADG82571, an isolated, recombinant or synthetic nucleic acid encoding a peptide immunogenic for TPC2-specific antibody is useful for obtaining the nucleic acid. The antibody is useful for determining a condition in a subject associated with a high level of TPC2 or TPC3, and is useful for screening, diagnosing and monitoring conditions auch as cancer, pregnancy or fertility. The antibody is also cueful for treating conditions associated with inappropriate expression of TPC2 or TPC3 cross profile of transcriptase (RT)-PCR primer used to analyse the expression profile of the human telomerase gene, which is co-expressed with TPC-2 and TPC-3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel monoclonal or isolated polyclonal antibody that specifically binds human TPC2 or TPC3. useful for treating neoplasia.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            엄
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a monoclonal or isolated polyclonal antibody specifically binds human TPC2 or TPC3 (not defined, appearing as ADG8256) and ADG82571). Also included are an antibody obtained by collecting a natiserum from a subject immunised with a peptide comprising at least 10 contiguous amino acids of TPC-2 pr TPC-3, a host cell secreting the artibody, a composition for obtaining a TPC3-specific antibody comprising at least 10 contiguous amino acids ADG82569, a composition for obtaining a TPC3-specific antibody comprising a TPC3-specific antibody comprising a TPC3-specific antibody contiguous amino acids of ADG82571, an isolated, recombinant or synthetic nucleic acid encoding a peptide immunogenic for TPC2 specific antibody or TPC3-antibody and a host cell containing the nucleic acid. The antibody is useful for centermining a condition in a subject associated with a high level of TPC2 or TPC3, and is useful for screening, diagnosing and monitoring conditions such as cancer, pregnancy or fertility. The antibody is also useful for treating conditions associated with inappropriate expression of TPC2 or TPC3 such as neoplasia. The present sequence is a reverse transcriptise (RT)-PCR primer used to analyse the expression profile of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human; 88; PCR; telomerase; cancer; pregnancy; fertility; neoplasm; hTR; RT-PCR; reverse transcriptase PCR; primer.

RNA (TR) component genes. The TR gene promoter can be linked to a heterologous gene, especially a gene encoding a cytotoxin, for therapy of cancer, especially neoplasias. The telomerase is necessary for the curestricted proliferative capacity of many human cancers. Mutation or unregulation of the telomerase repression pathway may cause reactivation or upregulation of telomerase expression in cancer. Substances, cidentified in the methods, can be used to block transcription from the TR gene promoter through interaction of the 5' regulatory sequences. These cubstances, e.g. antitaense oligonuclectides, transcription factors, peptide nucleic acids and factors that disrupt signal transduction, are useful for cancer therapy. In particular, gene therapy vectors (especially poffs2-codyupp) comprising the promoter and a viral thymidine kinase gene can be used to convert a producy, e.g. gancyclovir, so that cooplasia can be controlled or treated. Direct down-regulation of telomerase RNA gene through manipulation of transcription factors may be effective anticancer therapy and the cloning of the hTR gene promoter allows the analysis of therapeutic molecules which modulate hTR promoter activity. Sequences AAZ01623-80 represents PCR primers for amplifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .;

The present sequence represents a human telomerase RNA sequence which is the target of peptide nucleic acid molecules (PNA). The PNA molecules the target of peptide nucleic acid molecules (PNA). The PNA molecules control to mammalian telomerase, and inhibit telomerase activity. Telomerase is a ribonucleoprotein enzyme that telomerase activity. Telomerase is a ribonucleoprotein enzyme that telomerase activity. Telomerase is a ribonucleoprotein enzyme that telomerases contained within the RNA component of the enzyme. The nucleotide sequence contained within the RNA component of the enzyme. The invention relates to PNA molecules having a sequence of no more than 25 bases, which include the sequence GTTAGG. The uncharged nature of the PNA carectases the melting temperature of associating strands, increases the rate of association with targeted nucleic acids, and afforted greater resistance of degradation by proteases or nucleases. The therapeutic PNAs may be used for treating disease conditions such as cancers, neoplasia, hyperplasia, neurodegenerative diseases or nucleases. The immunodeficiancy virus (HIV) infection/AIDS (acquired immunodeficiency syndrome) and associated pathologies, fungal infections, and other cytocoxic or diseases characterized by abnormal telomere metabolism or telomerase activity, in combination with antineoplastic and other cytocoxic or cytostatic agents, antifungal agents, and other nucleotides. PNAs may be used for molecular diagnostics, labelled PNAs are used as hybridization probes to detect or quantitate polymicleotides having a human telomerase and as probes to detect the RNA component of a mammalian telomerase and as inhibitors of telomerase activity. The method of the present invention can be used to detect an immortal or methods of the present invention can be used to detect an immortal or methods of the present invention can be used to detect an immortal or necessaries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mammalian; forensic; paternity testing; human telomerase RNA component; hTR gene RFLP pattern; cancer; inflammation; lymphoproliferative disease; autoimmune disease; neurodegenerative disease; neoplasia; hyperplasia; HIV; AIDS; human immunodeficiency virus; telomere metabolism; cytostatic; acquired immunodeficiency syndrome; anti-inflammatory; ss.

                                                                                                                                                                                                                                                                                                                                                                                                       à
                                                                                                                                                                                                                                                                                                                                        The present invention relates to peptide nucleic acids (PNAs), comprising a sequence of 6-25 nucleobases, that inhibit telomerase activity in mammalian cells by hybridising to the RNA component of mammalian telomerase. The PNAs are useful as probes to detect the RNA component of mammalian telomerase and as inhibitors of telomerase activity, or to detect and/or quantitate polymucleotide having the human telomerase RNA component (hTR) sequence, as well as in forensic identification of individuals, such as paternity testing or identification of criminal suspects or unknown descendants based on the HTR gene RRLP pattern. The PNA can be further used for treating or preventing cancer, inflammation, lymphoproliferative diseases, autoimmune disease, or neurodegenerative diseases. The PNAs in combination with other pharmaccuticals (such as antineoplastic or cytostatic agents) can be used for treating neoplasia, human immunodeficiency virus (HIV) infections, acquired immunodeficiency syndrome (AIDS) and associated pathologies, and other diseases characterised by abnormal telomerase activity. The present sequence representing hTR RNA strand #1 is used to test the inhibition of telomerase activity by the PNAs of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö

                                                                                                                                                                                            The present invention provides a method for inhibiting or reducing the growth of a cell which involves administering to the cell a telomere damage inducing agent and a telomerase inhibitory agent. This can be used in the treatment of aberrant cell growth, including cancers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New polynucleotide(s) anti:sense to human telomerase - used for detecting or inhibiting human telomerase, e.g. for treating cancers, contraception, immuno-suppression or treating infection.
Inhibiting or reducing growth of cell for treating cancer, comprising administering telomere damage-inducing agent and telomerase inhibitory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               RNA component; human telomerase; antisense oligonucleotide; infection; neuroblastoma; bladder cancer; colon cancer; prostate cancer; cancer; contraception; sterilisation; immunosuppression; therapeutic; hTR; immune system down-regulation; anti-inflammatory therapy; ss.

antisense oligonucleotides to the RNA component of human telomerase (hTR). These antisense oligonucleotides specifically hybridise to a nucleotide sequence within an accessible region of the hTR, but that does not hybridise to a sequence within the template region of hTR. These oligonucleotides may specifically be used for detection of an RNA component of human telomerase in a sample. This is useful for diagnosing cancer (especially neuroblastona, bladder, colon and prostate cancer).

Can providing prognosis for a cancer patient. The inhibitory accounce. Oligonucleotides can inhibit the telomerase activity level in a cell by interfering with transcription of the RNA component, decreasing the half-cancer of the RNA component into the telomerase activity inhibiting the half-cancer of the RNA component into the telomerase noisonucleotides can be used for inhibiting telomerase activity in both cultured cells and in be used for inhibiting telomerase activity in both cultured cells and in breventing cancer, for contraception or sterilisation, for immunosuppression, and for selectively down-regulating specific branches confine immune system, e.g. a specific subset of T-cells, in anti-cinflammatory therapies or for treating infections by, e.g. yeast,
                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is an oligonucleotide used in the measurement of Tm values and their complimentary peptide nucleic acids (PNAs), (e.g. AAT89228-T89233, AAT89243-T89244). PNAs hybridise specifically to an RNA component of mammalian telomerase, and include the sequence GGG for specific hybridisation to the template region of this component. PNAs can be used as probes to detect the RNA component of mammalian telomerase and as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  nseq

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents PCR primer TRC31 used for amplifying the human telomerase (hTR) template. The RNA and DNA can be used in hybridisation assays to detect or quantify telomerase activity in cells, tissue or fluid samples, e.g. for diagnosis of eukaryotic parasites (yeast and protozoa) or tumours. It is also useful as primers for amplification assays. The truncated or recombinant vertebrate telomerase is used therapeutrically to increase telomerase activity (also as reagents in the screening assay) while the RNA or other inhibitors such as antisense molecules, are used to reduce such activity. Typical applications are initiation/restoration of activity to cause senescence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               telomerase. Detecting telomerase allows early diagnosis of tumour or infection, before clinical signs manifest. Telomerase inhibitors directed against e.g. Trypanosoma should cause fewer side effects than drugs currently used to treat such infections. The DNA encodes those parts of MTR RNA essential for activity but are significantly shorter than the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cancer; eukaryotic parasite; hTR; vertebrate telomerase; yeast; protozoa; tumour; antibody; polymerase chain reaction; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding essential RNA components of human telomerase - also truncated or recombinant telomerase, useful for diagnosis and treatment of cancer and infection by eukaryotic parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         or to prevent immortalisation of cells in tumours or parasites. The DNA is also used to produce recombinant telomerase, which can then be used conventionally to raise antibodies for diagnostic detection of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

primers AAV68464-65 are used for the RT-PCR amplification of the RNA component of human telomerase (hTR). The invention relates to an activate complex (A1) that comprises: (a) an antisense oligonuclectide, complementary to a 12-25 nucleotide portion of hTR, with a hydroxyl moiety at the first end; and (b) a linker attached to the first end, and (c) an activator of RNase L attached to the linker. The citrator-antisense complex may be used for inhibiting the growth of a telomerase-expressing malignant cell or tumour. The complex is used to specifically cleave the ribonuclectide portion of a telomerase enzyme. The complex inhibiting growth of telomerase expressing malignant cells from brain tumour malignant glioma, breast tumour, renal cell cancer. The complex inhibiting spowth of telomerase expressing malignant cells from brain tumour malignant glioma, breast tumour, renal cell cancer. Celisorders, may be treated including various acute and chronic leukemias, polycthemia vera, Hodgkin's and non-Hodgkin's lymphomas, multiple myeaven.
                                                                                                                                                                                                                                                                                                                     cleave; brain; tumour malignant glioma; breast tumour; renal cell cancer; melanoma; prostete cancer; leukemia; polytchemia vera; myelloma; sarcoma; Hodgkin's lymphoma; Waldenstrom's macroglobulinemia; heavy chain disease; carcinoma; chemotherapeutic; antisense; RT-PCR; primer; ss.
                                                                                                                                                                                                                                                                                                    Human; telomerase; hTR; activator-antisense complex; malignant; enzyme;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New RNase L activator-telomerase antisense complex - useful to inhibit telomerase activity in telomerase-expressing malignancies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               tumours, including numerous sarcomas and carcinomas. The complex is preferably administered in combination with a chemotherapeutic agent, particularly either cisplatin, doxorubicin, mitomycin, daunorubicin,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Torrence
                                                                                                                                                                                                                                                            Human telomerase RNA (hTR) amplifying RT-PCR primer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 24 BP; 3 A; 6 C; 10 G; 5 T; 0 U; 0 Other;

Component of human telomerase (hTR). The invention relates to an activator-antisense complex that comprises: (a) an antisense to an activator-antisense complex that comprises: (a) an antisense to an object of complementary to a 12-25 nucleotide portion of hTR, with a hydroxyl moiety at the first end; and (b) a linker attached to the linker. The cityst end, and activator of RNase L attached to the linker. The city activator-antisense complex may be used for inhibiting the growth of a telomerase expressing malignant cell or tumour. The complex is used to specifically cleave the ribonucleotide portion of a telomerase enzyme. The complex inhibits growth of telomerase expressing malignant cells from brain tumour malignant glloma, breast tumour, renal cell cancer, melanoma, and prostate cancer. Many other malignancies and related disorders, may be treated including various acute and chronic leukemias, polycthemia vera, Hodgkin's and non-Hodgkin's lymphomas, multiple tumours, including numerous sarcomas and carcinomas. The complex is tumours, including numerous sarcomas and carcinomas. The complex is treated in combination with a chemotherapeutic agent,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to promoter regions from mouse and numerated to a hereacologous gene, especially a gene promoter can be linked to a cherologous gene, especially a gene encoding a cytotoxin, for therapy of cancer, especially neoplasias. The telomerase is necessary for the cancer, especially neoplasias. The telomerase is necessary for the unrestricted proliferative capacity of many human cancers. Mutation or dysregulation of the telomerase expression in cancer. Substances, identified in the methods, can be used to block transcription from the TR gene promoter through interaction of the 5' regulatory sequences. These substances, e.g. antisense oligonucleotides, transcription factors, or useful for cancer therapy. In particular, gene therapy vectors useful for cancer therapy. In particular, gene therapy vectors (especially pGT62-codAupp) comprising the promoter and a viral thymidine complasia can be convert a prodrug, e.g. gancyclovir, so that neoplasia can be convert a prodrug, e.g. gancyclovir, so that comparase RNA gene through manipulation of transcription factors may be effective anticancer therapy and the cloning of the HTR gene promoter allows the analysis of therapeutic molecules which modulate hTR promoter activity. Sequences AAZ07623-80 represents PCR primers for amplifying thuman TR gene (HTR) promoter sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to promoter regions from mouse and human telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse and human telomerase RNA gene promoters, useful for tumor specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                      Telomerase RNA; TR; promoter; cytotoxin; cancer; neoplasia; hTR; gene therapy; thymidine kinase gene; anticancer therapy; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ..

NAM (TR) component genes. The TR gene promoter can be linked to a checrologous gene, especially a gene promoter can be linked to a checrologous gene, especially a gene promoter can be linked to a cancer. Superially neoplasias. The telomerase is necessary for the cancer is especially neoplasias. The telomerase is necessary for the currestricted proliferative capacity of many human cancers. Mutation or dysregulation of the telomerase repression pathway may cause reactivation or the methods, can be used to block transcription from the TR gene promoter through interaction of the 5' regulatory sequences. These substances, e.g. antisense oligomucleotides, transcription factors, peptide nucleic acids and factors that disrupt signal transduction, are useful for cancer therapy. In particular, gene therapy vectors (especially pGT62-codAupp) comprising the promoter and a viral thymidine consecting and be used to convert a producy. Generally pGT62-codAupp) comprising the promoter and a viral thymidine concortive anticancer therapy and the cloning of the franscription factors may be effective anticancer therapy and the coloning of the franscription actions activity. Sequences AAZ07623-80 represents PCR primers for amplifying thuman TR gene (hTR) promoter sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to promoter regions from mouse and human telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Mouse and human telomerase RNA gene promoters, useful for tumor specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          g
                                                                                                                                                                                                                                                                                                                                                                    The invention relates to promoter regions from mouse and human telomerase

RNA (TR) component genes. The TR gene promoter can be linked to a

Cancer, especially agene encoding a cytotoxin, for therapy of

cancer, especially neoplasias. The telomerase is necessary for the

cancer, especially neoplasias. The telomerase is necessary for the

curregulation of the telomerase repression pathway may cause reactivation of

cypergulation of the telomerase expression in cancer. Substances,

clantified in the methods, can be used to block transcription from the TR

cyperide promoter through interaction of the 5' regulatory sequences. These

substances, e.g. antisense oligonucleotides, transcription factors,

cyperide nucleic acids and factors that disrupt signal transduction, are

useful for cancer therapy. In particular, gene therapy vectors

chepcially pG762-codAupp) comprising the promoter and a viral thymidine

ckinase gene can be used to convert a prodrug, e.g. gancyclovir, so that

celomerase RNA gene through manipulation of transcription factors may be

effective anticancer therapy and the cloning of the hTR gene promoter

allows the analysis of therapeutic molecules which modulate hTR promoter

callows the analysis of therapeutic molecules which modulate hTR promoter

burner man and a prodrugh of the pTR promoter allows the analysis of the pTR persents pCR primers for amplifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Peptide nucleic acid; PNA; telomerase; ribonucleoprotein enzyme; cancer; inhibitor; neoplasia; neurodegenerative disease; aging; hyperplasia; AIDS; HIV; fungal infection; forensic identification; detect; tumour;

The present sequence represents a peptide nucleic acid molecule which hybridises to the mRNA component of mammalian telomerase, and inhibits telomerase activity. Telomerase is a ribbonucleoprotein enzyme that synthesizes one strand of the telomeric DNA, using as a template an 11 nucleotide sequence contained within the RNA component of the enzyme. The invention relates to PNA molecules having a sequence of no more than 25 concess, which include the sequence GTTAGG. The uncharged nature of the PNA backbone increases the melting temperature of associating strands, increases the rate of association with targeted nucleic acids, and affords greater resistance of degradation by proteases or nucleases. The therapeutic PNAs may be used for treating disease conditions such as cancers, neoplasia, hyperplasia, neurodegenerature diseases. The ferminal strands and associated pathologies, fungal infections, and other conditions and other cytostatic agents, antifungal agents, fungal infections, and other diseases characterized by abnormal telomere metabolism or telomerase activity, in combination with antineoplastic and other cytotoxic or cytostatic agents, antifungal agents, and other nucleotides. PNAs may be used for molecular diagnostics, labelled PNAs are used as Hybridization probes to detect or quantitate polynucleotides having a human telomerase and as individuals, e.g. paternity testing, based on hTR gene restriction of individuals, e.g. paternity testing, based on hTR gene restriction fragment length polymorphism (RFLP) pattern. PNAs are also useful as probes to detect the RNA component of a mammalian telomerase and as inhibitors of telomerase activity. The method of the present invention and person inhibitors of telomerase activity. The method of detected as cancerous conditions to be detected with increased confidence and methods of the present invention can be used to detect an immortal or methods of the present invention acells are detected an immortal or cell expresses telomerase activity and its RNA component
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New peptide nucleic acid (PNA) compounds that inhibit telomerase activity in mammalian cells is useful as probes to detect the RNA component of a mammalian telomerase.
                                                                                                                              /*tag= a /*tag= a /*tag= a /*tag= nucleic acid molecule, where N-(2-aminoethyl)glycine units are linked to nucleotide bases via glycine amino N through a methylenecarbonyl linker.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gape

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to peptide nucleic acids (DNAs), comprising a sequence of 6-25 nucleobases, that inhibit telomerase activity in mammalian cells by hybridising to the RNA component of mammalian cells by hybridising to the RNA component of mammalian telomerase and as inhibitors of telomerase activity, or to detect and/or quantitate polynucleotide having the human telomerase RNA component (hTR) sequence, as well as in forensic identification of individuals, such as paternity testing or identification of criminal suspects or unknown descendants based on the HTR gene RFLP pattern. The PNA can be further used for treating or preventing cancer, inflammation, lymphoproliferative diseases, autoimmune disease, or neurodegenerative diseases. The PNAs in combination with other pharmaceuticals (such as antineoplastic or cytostatic agents) can be used for treating neoplasia, human immunodeficiency virus (HIV) infections, acquired immunodeficiency syndrome (AIDS) and associated pathologies, and other diseases characterised by abnormal telomera metabolism or telomerase activity. The present sequence representing a DNA oligonucleotide is complementary to some of the PNAs of the present invention, and is used
                                                                                                                                                          hTR gene RFLP pattern; cancer; inflammation; forensic; lymphoproliferative disease; autoimmune disease; hyperplasia; neurodegenerative disease; neoplasia; HIV; AIDS; cytostatic; human immunodeficiency virus; acquired immunodeficiency syndrome; telomere metabolism; anti-inflammatory; immunosuppressive; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New peptide nucleic acids that hybridizes to the RNA component of mammalian telomerase, useful for treating or preventing cancer, inflammation, lymphoproliferative diseases, autoimmune disease, on neurodegenerative diseases.
                                                                                                               Oligonucleotide #1 used in melting temperature studies of PNAs.
                                                                                                                                          paternity testing; human telomerase RNA component;

Provided are an Adenovirus vector with a telomerase promoter associated with cancer occurrence and a method for using the same for anti-cancer treatment. An Adenovirus expression vector ps-HTERT-TK is produced by using an expression cassette consisting of suicide gene HSV-TK, as late plyadenylation signal for human telomerase hTERT promoter and bovine growth hormone (BGH). Adenovirus clone Ad-hT-TK(KCCM 10387) is used for anti-cancer gene therapy. The present sequence represents a primer of the

                                                                                                                                                                                                                                 cellular portion of body fluid from a cancer patient using a modified cellular portion of body fluid from a cancer patient using a modified tellular portion of body fluid from a cancer patient using a modified cellular protecol (TRAP). A method for detecting cancer comprises: (a) removing the cellular portion of a body fluid specimen from the patient; (b) preparing a protein extract from the body fluid remainder; (c) assaying the extract for the presence and quantity of telomerase RNA or telomerase activity; and (d) comparing the results with normal levels, to determine the presence of cancer. The methods are used in cancer diagnosis and prognosis, and also to monitor cancer therapy effectiveness. Unlike prior art telomerase activity assays in cancer patients, the method allows noninvasive sample collection. The methods are also more reliable and less tumour specific than other methods which detect circulating tumour markers. The present sequence represents a human telomerase RNA template PCR primer used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

                                                                                            This is an oligonucleotide used in the measurement of Tm values and thei complimentary peptide nucleic acids (PNAs), (e.g. AAT89225-T89227). PNAs hybridise specifically to an RNA component of mammalian telomerase, and include the sequence GGG for specific hybridisation to the template region of this component. PNAs can be used as probes to detect the RNA component of mammalian telomerase and as inhibitors of telomerase activity, especially in the treatment of cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /note= "Peptide nucleic acid molecule, where N-(2-aminoethyl)glycine units are linked to nucleotide bases via glycine amino N through a methylenecarbonyl linker"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents a peptide nucleic acid molecule which hybridises to the mRNA component of mammalian telomerase, and inhibits telomerase activity. Telomerase is a ribonucleoprotein enzyme that

```
controlled sequence contained within the RNA component of the enzyme. The nucleotide sequence contained within the RNA component of the enzyme. The nucleotide sequence of no more than 25 bases, which include the sequence of TayAGG. The uncharged nature of the PNA controlled the sequence of associating strands, and affords greater realstance of degradation with targeted nucleia acids, and affords greater realstance of degradation by proteases or nucleases. The therapeutic PNAs may be used for treating disease conditions such as the cancers, neoplasia, hyperplasia, neurodegenerative diseases. The immunodeficiency virus (HVV) infection/AIDS (acquired immunodeficiency syndrome) and associated pathologies, fungal infections, and other cyndrome) and associated by abnormal telomere metabolism or telomerase activity, in combination with antineoplastic and other cytotoxic or cytostatic agents, antifungal agents, and other nucleotides. PNAs may be used for molecular disagnostics, labelled PNAs are used as hybridization cytostatic agents, antifungal agents, and other nucleotides. PNAs may be used for molecular disagnostics, labelled PNAs are used as hybridization or probes to detect or quantitate polynucleotides having a human telomerase of individuals, e.g. paternity testing, based on HTR sequence. PNA propose so used for forensic identification of inhibitors of telomerase activity. The membrdo of the present inventions to be detected with increased confidence and so probbs to detect the RNA component of a mammalian telomerase and as inhibitors of telomerase activity. The membrdo of the present invention can be used to detect an immortal or methods of the present invention can be used to detect an immortal or enclopastic cell expresses telomerase activity and its RNA component
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps

The present invention relates to peptide nucleic acids (PNAs), comprising a sequence of 6-25 nucleobases, that inhibit telomerase activity in mammalian cells by hybridishing to the RNA component of mammalian cells by hybridishing to the RNA component of mammalian telomerase and as inhibitors of telomerase activity, or to detect and/or quantitate polynucleotide having the human telomerase RNA component (hTR) sequence, as well as in forensic identification of individuals, such as paternity testing or identification of criminal suspects or unknown descendants based on the hTR gene RRLP pattern. The Suspects or unknown descendants based on the hTR gene RRLP pattern. The suspects or unknown descendants based on the hTR gene RRLP pattern. The Suspects or unknown descendants have not identification of criminal suspects or unknown descendants have not be need for treating continuous lymphoproliferative diseases, autoimmune disease, or neurodegenerative diseases, the PRAs in combination with other pharmaceuticals (such as antimunodeficiency virus (HIV) infections, acquired immunodeficiency virus (HIV) infections, acquired immunodeficiency syndrome (AIDS) and associated pathologies, and other diseases characterised by abnormal telomere metabolism or telomerase activity. The present sequence repersenting a DNA oligonucleotide is complementary to some of the PNAs of the present invention, and is used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cytostatic; vasotropic; protozoacide; immunosuppressive; dermatological; neuroprotective; anti-HIV; ophthalmological; antiulcer; antirheumatic; antiarthritic; antiinflammatory; gene therapy; telomerase; human; terc; RNA interference; short interfering nucleic acid; siNA; short interfering RNA; double-stranded RNA; micro-RNA; mirNA; short interfering siRNA; shrNA; expression modulation; gene therapy; drug screening; diagnosis; therapeutic target identification; pharmacogenomics; gene function analysis; gene mapping; TERC; TERT; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
         New peptide nucleic acids that hybridizes to the RNA component of mammalian telomerase, useful for treating or preventing cancer, inflammation, lymphoproliferative diseases, autoimmune disease, or neurodegenerative diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 .
